# User Manual

BuddyU

BuddyU is a mobile scheduling application designed to help Drexel students better coordinate their schedule with other students.
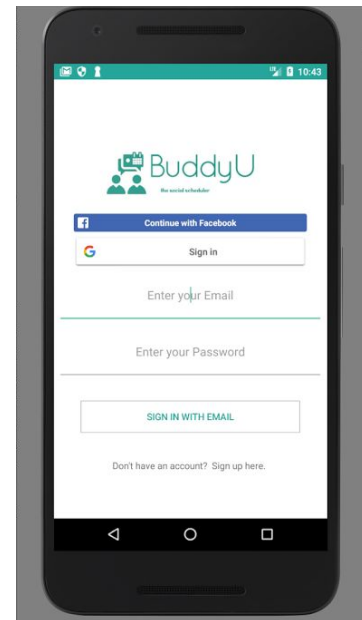

Registration/Creating An Account:

When first opening BuddyU, users will see a screen on which they can either create an account or log into an account. To create an account, the user must choose to either link their account with their Facebook account, Google account, or other email account. If the user wishes to create their account with their Facebook account, the user will click the button "Continue with Facebook." Similarly, if they wish to make their account their Google account, the user will click the button "Sign in." If they wish to create their account with another email account, the user will click the button "Register with Email." Next, the user will choose an email and a password for their account by entering them into the given spaces.

Logging In:

Once the user has successfully created an account, they will be shown a screen with the BuddyU logo on and there will be two spaces, one for email and the other for a password that was created when making an account. Once the email and passwords are correct, the user will be directed to the BuddyU home screen which welcomes the user to the app and provides the logo to observe.
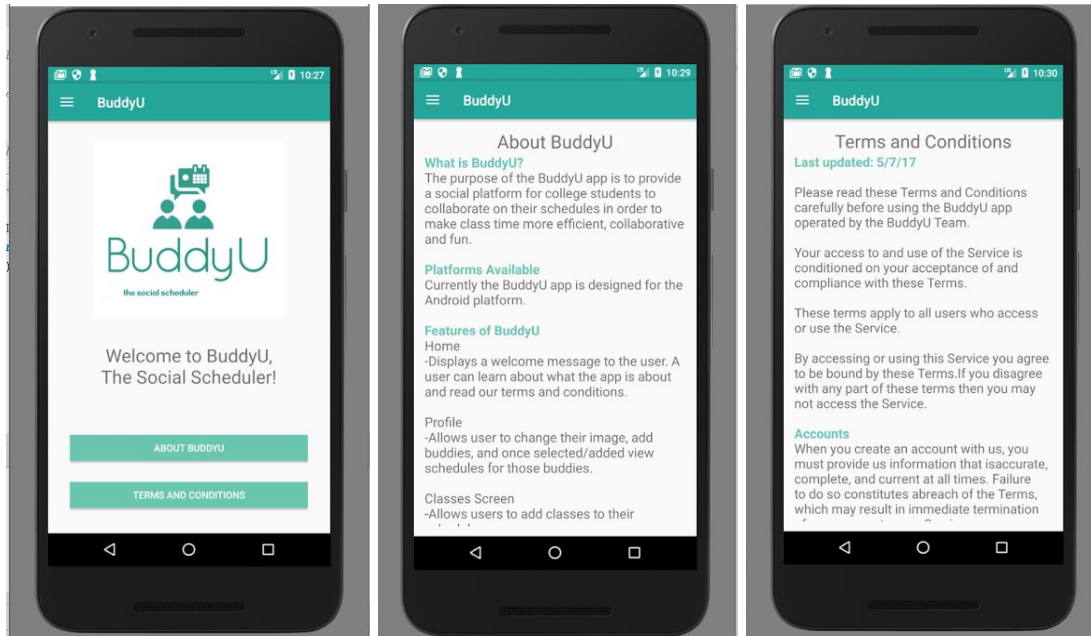

SideBar:

There is a sideBar indicated with three lines next to the BuddyU title on the top left of the home screen or any screen that the user must use to navigate through different screens. Options include Home, Profile,Classes,Schedule, and Logout.

BuddyU

Home:

      The home screen will display a welcome message to the user. This is the page where a user can learn more about our app by clicking the About BuddyU button or view the terms and conditions of our app by clicking the Terms and Conditions button.

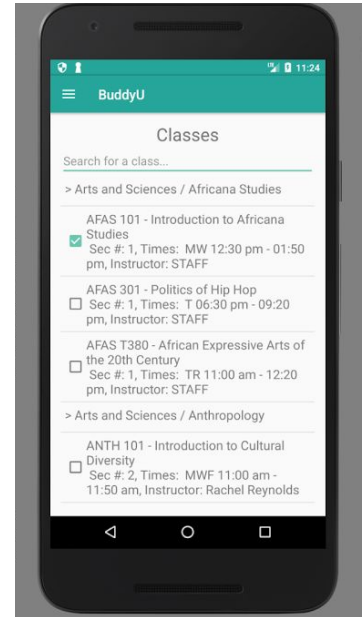

Profile:

      When the user logs in, their email is stored and will be displayed on the top middle of the screen. A button called "Upload Image" will appear and the user can click on that and select any picture they want from their gallery or take a actual picture from their phone. Below that will be displayed, in a green colored button, a Buddies button. If the user clicks on the Buddies button, they will be directed to a screen that lists all the buddies they currently have. This will be done by displaying the buddies emails. They can add them by checking the checkbox next to their email which is equivalent to adding them as a buddy. Once the checkbox is checked, the user can view another user's schedule. If the user wishes to go back, since this is android, they can click the back button on the phone, or they can use the sidebar to be directed back to the profile screen.

Classes:

When the user clicks on the classes tab on the sidebar, they will be directed to a classes screen. There they will see a list of classes that have similar type of information like on WebTMS. It goes in the list by the college and / and what type of field the class would fall into. It then lists the specific classes that are in that field. An individual class has this information: the abbreviated class information, the elongated class name, the section number,timings and instructor information. There are outlined mini boxes before the classes and if you click on them, they will appear as selected by becoming a green box with a white check in the middle. An example will be demonstrated in the screenshot screen below. There is also a search for a class filter at the top of the screen where the user can type in any keyword and the classes that contain that keyword will pop up, making navigation easy.

Making Your Schedule:

Once the user has selected all the classes they want in their schedule, they can go to their sidebar and select the schedule button. When done, they will be directed to a screen, where it displays "Your Schedule" on the top middle. Then the selected classes are going to be listed by days of the week(Monday, Tuesday, Wednesday, Thursday and Friday). There is also a day displayed on the top of the page right below the title that lists classes that have a TBD (To Be Determined) time.

Logging Out:

Finally, when the user is done with all their operations for the day, they can log out of their account if they wish, by going to the sidebar and clicking on the logout button. However, the app will keep the current user signed in. Thanks for using BuddyU, we hope you like our app.
